Can you confirm if the report you are getting this error on was made yesterday after noon? I want to see if NEW reports made after my code change are causing this error or if they are reports that still have the old code

Subject: Axon Narrative Assistant Error

Every time that I try to insert the narrative, this error pops up. I can hit close and copy the narrative to re paste after refreshing, but it wont save if I just refresh.
Thanks,
Sturgeon 474
